Facing the Consequences Sep 03 2020 Facing the Consequences presents a perspective on US mathematics and science education that is developed from data gathered as part of the Third International Mathematics and Science Study (TIMSS). TIMSS is the most extensive and far-reaching cross-national comparative study of mathematics and science education ever attempted. It includes comparing official curricula, textbooks, teacher practices, and student achievements for many countries (from 20 to 50 countries, depending on the particular comparison). Thousands of official documents and textbooks were analyzed. Thousands of teachers, principals, and other experts responded to survey questionnaires. A sample of mathematics teachers in three countries had their lessons videotaped. Hundreds of thousands of children in almost 50 countries were tested in mathematics and science. This report presents a closer look at US mathematics and science education through careful examination of TIMSS data. The authors believe this investigation shows how deceptive many often unquestioned assumptions about American education can be. Drawing upon many new analyses not previously reported and integrating these with previous analyses of TIMSS data, the authors develop and illustrate the argument that what happens to American students is the consequence of American beliefs that shape educational practice and the accretion of a myriad educational choices made in mathematics and science education.

Science Achievement in the Middle School Years Jun 12 2021 The Third International Mathematics and Science Study is the largest and most ambitious study ever undertaken by the International Association for the Evaluation of Educational Achievement. Forty-five countries collected data in more than 30 languages. Five grade levels were tested in the two subject areas. This report describes the science achievement of seventh and eighth graders, emphasizing the results from the eighth-grade assessment. Results are presented for the 41 countries that completed all the steps necessary to appear in this report. Singapore was the top performing country at both grade levels, with Colombia, Kuwait, and South Africa performing at the lowest levels. Perhaps the most striking finding was the large difference in average achievement between the top-performing and bottom-performing countries. Results provided a chain of overlapping countries, with most countries having an average achievement similar to that of a cluster of others, but with large differences between the top and bottom of the chain. In most countries and internationally, boys outperformed girls at both grade levels. The majority of eighth graders in nearly every country indicated that they liked science, but not all students had positive feelings about the subject. Home factors were strongly related to achievement in every participating country, but relationships between science achievement and instructional practices were less clear within and across countries. Six appendixes present information on study methodology and selected achievement results for some countries. (Contains 61 tables, 23 appendix tables, 19 figures, and 1 appendix figure.) (SLD)
