Inductance Calculations Mar 06 2021 Hoping to simplify matters for engineers overwhelmed by inductance calculations, the author brings together an invaluable collection of formulas and tables. For virtually every type of inductor, Dr. Grover provides a single simple formula, together with tables from which essential numerical factors may be interpolated. Starting with a survey of general principles, the text explains circuits with straight filaments; parallel elements of equal length; mutual inductance of unequal parallel filaments and filaments inclined at an angle to each other; and inductance of single-layer coils on rectangular winding forms. Additional topics include the mutual inductance of coaxial circular filaments and of coaxial circular coils; self-inductance of circular coils of rectangular cross section; mutual inductance of solenoid and a coaxial circular filament and coaxial single-layer coils; single-layer coils on cylindrical winding forms; and special types of single-layer coil. 1946 ed.

The Politics of the Death Penalty in Countries in Transition Apr 26 2020 The increase in the number of countries that have abolished the death penalty since the end of the Second World War shows a steady trend towards worldwide abolition of capital punishment. This book focuses on the political and legal issues raised by the death penalty in "countries in transition", understood as countries that have transitioned or are transitioning from conflict to peace, or from authoritarianism to democracy. In such countries, the politics that surround retaining or abolishing the death penalty are embedded in complex state-building processes. In this context, Madoka Futamura and Nadia Bernaz bring together the work of leading researchers of international law, human rights, transitional justice, and international politics in order to explore the social, political and legal factors that shape decisions on the death penalty, whether this leads to its abolition, reinstatement or perpetuation. Covering a diverse range of transitional processes in Asia, Africa, Latin America, Europe, and the Middle East, The Politics of the Death Penalty in Countries in Transition offers a broad evaluation of countries whose death penalty policies have rarely been studied. The book would be useful to human rights researchers and international lawyers, in demonstrating how transition and transformation, provide the catalyst for several of interrelated developments of which one is the reduction and elimination of capital punishment'.

The High School Student's Guide to Research Papers Jul 22 2022 It's the evening before your research paper is due, and you're staring at an empty, white computer screen. The cursor is pulsing, the clock is ticking, and you're panicking. Sound familiar? It's a scenario that all young adults will face, and with it comes stress, dread, pessimism, and writer's block. According to the National Center for Education Statistics, four out of five students are not proficient writers. This book will teach young adults everything they need to know about writing a paper, from crafting an outline to finalizing the documentation. We interviewed experienced teachers who explain exactly what they want from student papers, and we show you how to achieve it. If you need inspiration and motivation for writing your next paper, this book can be exactly what you need to start and finish that research paper with impressive vocabulary, smooth transitions, and concise details that teachers won't want to lay a red pen on.

Modeling the Economics of Greenhouse Gas Mitigation Nov 14 2021 Models are fundamental for estimating the possible costs and effectiveness of different policies for reducing greenhouse gas (GHG) emissions. There is a wide array of models to perform such analysis, differing in the level of technological detail, treatment of technological progress, spatial and sector details, and representation of the interaction of the energy sector to the overall economy and environment. These differences impact model results, including cost estimates. More fundamentally, these models differ as to how they represent fundamental processes that have a large impact on policy analysis—such as how different models represent technological learning and cost reductions that come through increasing production volumes, or how different models represent baseline conditions. Reliable estimates of the costs and potential impacts on the United States economy of various emissions reduction and other mitigation strategies are critical to the development of the federal climate change research and development portfolio. At the request of the U.S. Department of Energy (DOE), the National Academies organized a workshop, summarized in this volume, to consider some of these types of modeling issues.

Rules of Thumb Aug 31 2020 Brevity and practicality are the hallmarks of Rules of Thumb. Reflecting the most current MLA, APA, and CMS documentation styles, the sixth edition remains the ideal handbook for improving grammar without overwhelming student writers with specialized terminology, or—at under \$20 in most bookstores—with expense.

[Understanding UK Military Capability](#) Oct 01 2020 Between 2021 and 2031, the UK government is set to spend over £230 billion on its military. Who decides how to use these funds, and how can we be sure that the UK's armed forces can meet the threats of tomorrow? This book provides the answers to these crucial questions. Concentrating on decisions taken below the political level, it uncovers the factors that underpin the translation of strategic direction into military capability. In a series of interviews, over 30 top admirals, generals and air marshals give their own views on the procurement and maintenance of the nation's current and future military capability. Their unrivalled professional knowledge and experience affords a fascinating insight into the higher management of national defence.

[Labeling Genetically Modified Food](#) Apr 07 2021 Food products with genetically modified (GM) ingredients are common, yet many consumers are unaware of this. When polled, consumers say that they want to know whether their food contains GM ingredients, just as many want to know whether their food is natural or organic. Informing consumers is a major motivation for labeling. But labeling need not be mandatory. Consumers who want GM-free products will pay a premium to support voluntary labeling. Why do consumers want to know about GM ingredients? GM foods are tested to ensure safety and have been on the market for more than a decade. Still, many consumers, including some with food allergies, want to be cautious. Also, GM crops may affect neighboring plants through pollen drift. Despite tests for environmental impact, some consumers may worry that GM crops will adversely affect the environment. The study of risk and its management raises questions not settled by the life sciences alone. This book surveys various labeling policies and the cases for them. It is the first comprehensive, interdisciplinary treatment of the debate about labeling genetically modified food. The contributors include philosophers, bioethicists, food and agricultural scientists, attorneys/legal scholars, and economists.
