Also, institutions need to master the digital transformation for their business model to be sufficiently sustainable for the years to come. This book will offer ways on how to achieve just that. The book has been written by senior ESG, Compliance and NFR experts from key markets in Europe, the U.S. and Asia. The resources of both governments and traditional philanthropy are either barely growing or in decline, yet the problems of poverty, ill-health, and environmental degradation balloon daily. It is therefore increasingly clear that we urgently need new models for financing and promoting social and environmental objectives. Fortunately, a significant revolution appears to be underway on the frontiers of philanthropy and social investing, tapping not only philanthropy, but also private investment capital, and providing at least a partial response to this dilemma. This book examines the new actors and new tools that form the heart of this revolution, and shows how they are reshaping the way we go about supporting solutions to social and environmental problems throughout the world. With contributions from leading experts in the field, New Frontiers of Philanthropy provides a comprehensive analysis of the many new institutions that have surfaced on this new frontier of philanthropy and social investment; the new tools and instruments these institutions are bringing to bear; the challenges that these actors and tools still encounter; and the steps that are needed to maximize their impact. The result is a powerful and accessible guide to developments that are already bringing significant new resources into efforts to solve the world's problems of poverty, ill-health, and environmental degradation;

unleashing new energies and new sources of ingenuity for social and environmental problem-solving; and generating new hope in an otherwise dismal scenario of lagging resources and resolve. Investors, philanthropists, social entrepreneurs, nonprofit leaders, business executives, government officials, and students the world over will find much to build on in these pages.

Integrated Reporting Management Sep 15 2021

Integrated reporting in corporate communication is a process that results in improved communication, most visibly an 'integrated report,' about value creation over time. An integrated report is a concise communication about how an organization's strategy, governance, performance, and prospects lead to the creation of value over the short, medium, and long term. It represents the integrated summarization of a company's performance in terms of both financial and other relevant information. Integrated reporting provides greater context for performance data, clarifies how relevant information fits into operations or a business, and may help make decision making better in the long-term. The aim and scope of this book is to provide readers with an overview and analysis of the topics of both integrated financial reporting and a multiple capital model. Analyzing this topic through both a qualitative and quantitative framework, this important business topic is introduced and framed in the

The Business Case for

Sustainable Finance Dec 06

2020 In the world of finance, environmental, social and governance (ESG) factors have until recently really only impinged upon the 'soft' domains of public relations, philanthropy and corporate social responsibility. The existing literature focuses on issues including how finance can contribute to environmental governance, the need for investment to mitigate climate change and how financial institutions should act in a responsible way when conducting their operations. However, very little literature focuses solely on why exactly, and under what circumstances, ESG factors influence the profitability of investment, insurance and lending activities and a systematic, rigorous business case for ESG finance analysis is largely missing. The aim of this book is to tackle and answer the question: 'when and why is it profitable to

This is a useful proposition for the investigation of the presence versus absence of the going concern in the sustainability and non-financial reports and disclosure by companies. Review—Background Paper

On Traction Jan 07 2021 A key criterion for judging the success of the Financial Sector Assessment Program (FSAP) is the extent to which the program has enhanced the IMF's engagement with policymakers and influenced country policies. This reflects the fact that achieving one of the program's key objectives—reducing the frequency and severity of financial crises—rests on its ability to encourage policy action by country authorities, either directly or through other bilateral and multilateral activities. The “traction” of FSAPs thus reflects the degree to which the program is seen as useful by the authorities and the effect it has in shaping the domestic policy agenda. And the impact that the FSAP may have on wider domestic and international audiences.
