IUTAM Symposium on Elastohydrodynamics and Micro-elastohydrodynamics Mar 29 2020 This volume contains the proceedings of the IUTAM Symposium on Elastohydrodynamics and Microelastohydrodynamics held in Cardiff from 1-3 September 2004. It contains 31 articles by leading researchers in the field. The symposium focused on theoretical, experimental and computational issues in elastohydrodynamic lubrication (EHL) both in relation to smooth surfaces and in situations where the film is of the same order or thinner than the surface roughness (micro-EHL). The last IUTAM Symposium in this general area of contact of deformable bodies was in 1974. The emphasis in the Symposium was upon fundamental issues such as: solution methods; lubricant rheological models, thermal effects; both low and high elastic modulus situations; human and replacement joints; fluid traction; dynamic effects, asperity lubrication and the failure of lubrication; surface fatigue and thermal distress under EHL conditions. The book will be useful to those active in basic elastohydrodynamics research who wish to gain an up-to-date understanding of the subject from leading experts in the field.

[Patrick Suppes: Scientific Philosopher](#) Mar 21 2022 Patrick Suppes is a philosopher and scientist whose contributions range over probability and statistics, mathematical and experimental psychology, the foundations of physics, education theory, the philosophy of language, measurement theory, and the philosophy of science. He has also been a pioneer in the area of computer assisted instruction. In each of these areas, Suppes has provided seminal ideas that in some cases led to shaping the direction of research in the field. The papers contained in this collection were commissioned with the mandate of advancing research in their respective fields rather than retrospectively surveying the contributions that Suppes himself has made. The authors form an interesting mixture of researchers in both formal philosophy of science and science itself all of whom have been inspired by his ideas. To maintain the spirit of constructive dialogue that characterizes Suppes's intellectual style, he has written individual responses to each article. In Volume 1: Probability and Probabilistic Causality, nineteen distinguished philosophers and scientists focus their attention on probabilistic issues. In Part I the contributors explore axiomatic representations of probability theory including qualitative and interval valued probabilities as well as traditional point valued probabilities. Belief structures and the dynamics of belief are also treated in detail. In Part II the rapidly growing field of probabilistic causation is assessed from both formal and empirical viewpoints. For probability theorists, statisticians, economists, philosophers of science, psychologists and those interested in the foundations of mathematical social science. In Volume 2: Philosophy of Physics, Theory Structure, and Measurement Theory, fifteen distinguished philosophers and scientists cover a wide variety of topics. Part III covers

issues in quantum theory, geometry, classical mechanics, and computational physics. Part IV explores Suppes's well known set-theoretic account of scientific theories which has served him well throughout his career. Suppes's contributions to measurement theory have been widely used in mathematical psychology and elsewhere, and this material is the subject of Part V. For physicists, logicians, workers in mathematical social science, and philosophers of science. In Volume 3: Philosophy of Language and Logic, Learning and Action Theory, fourteen distinguished philosophers and scientists explore issues in the philosophy of language, logic, and philosophical psychology. Suppes's suggestions that quantum theory requires a rethinking of classical logic form a particularly sharp account of that controversial thesis, and Part VI deals with this issue together with topics in the philosophy of language and logic, including relational grammars and anaphora. Part VII deals with issues in psychology, action theory, and robotics, while Part VIII concludes with a general survey of Suppes's views in the philosophy of science. A comprehensive chronological and topical bibliography of Suppes's writings is included in this volume. For philosophers of language, theoretical linguists, logicians, workers in mathematical social sciences, and philosophers of science.

Advances in Turbulence IV Jul 21 2019 The European Turbulence Conferences have been organized under the auspices of the European Mechanics Committee (Euromech) to provide a forum for discussion and exchange of recent and new results in the field of turbulence. The first conference was organized in Lyon in 1986 with 152 participants. The second and third conferences were held in Berlin (1988) and Stockholm (1990) with 165 and 172 participants respectively. The fourth was organized in Delft from 30 June to 3 July 1992 by the J.M. Burgers Centre. There were 214 participants from 22 countries. This steadily growing number of participants demonstrates both the success and need for this type of conference. The main topics of the Fourth European Turbulence Conference were: Dynamical Systems and Transition; Statistical Physics and Turbulence; Experiments and Novel Experimental Techniques; Particles and Bubbles in Turbulence; Simulation Methods; Coherent Structures; Turbulence Modelling and Compressibility Effects. In addition a special session was held on the subject of Cellular Automata. Each of the sessions was introduced with a survey lecture. The lecturers were: W. Eckhaus, A.J. Libchaber, L. Katgerman, F. Durst, M. Lesieur, B. Legras, D.G. Dritschel and P. Bradshaw. The contributions of the participants were subdivided into oral and poster presentations. In addition to the normal program, some Special Interest Groups of ERCOFTAC (European Research Community on Flow, Turbulence and Combustion) presented their research activities in the form of a poster.

After the Imperial Turn Feb 08 2021 DIVEssays in this collection assess "the nation" as a subject of disciplinary inquiry, considering both its enduring relevance and its inadequacy as an analytical category for studying history, literature, and culture./div

Infertility Jan 07 2021 Infertility: A Crossroad of Faith, Medicine, and Technology brings together a diverse group of clinicians, theologians, and philosophers to examine the use of reproductive technologies in the light of the Roman Catholic moral tradition and recent teaching. The book provides relevant background information (e.g. Donum Vitae from the Congregation for the Doctrine of the Faith) as it explores the psychological, social, legal, and moral contexts of reproductive medicine. This book is Volume 3 of Catholic Studies in Bioethics in the series Philosophy and Medicine.

The Limits of Logical Empiricism Dec 18 2021 This volume collects some of the most significant papers of Arthur Pap. Pap's work played an important role in the development of the analytic tradition. This goes beyond the merely historical fact of Pap's influential views of dispositional and modal concepts. Pap's writings in philosophy of science, modality, and philosophy of mathematics provide insightful alternative perspectives on philosophical problems of current interest.

Variability of Air Temperature and Atmospheric Precipitation in the Arctic Oct 28 2022 It has been known at least since the end of the century that the polar areas play a very important role in the formation of the Earth's climates. It is also known today that they are the most sensitive regions to climatic change, and are thus perfect case studies for the detection of such changes. The most serious obstacle to the study of climatic and other geographical elements of the polar areas (including the Arctic) has always been the severe climatic conditions which prevail in these regions. Because of these extreme conditions, research into particular elements of the climatic system (including the

atmosphere) began here much later than it did in lower latitudes. For instance, the whole area of the Arctic was not sufficiently covered with a network of meteorological stations until the late 1940s (and even then there were large areas of the central Arctic and the Greenland interior for which no data were available). This is probably why it was not until the start of the 1990s that a body of work began to appear which analysed in any depth climatic variability for the Arctic as a whole. While a considerable number of papers had been published before this period, most of them were local studies presenting highly localised information, providing air temperature measurements but often little else.

An Introductory Philosophy of Medicine Apr 10 2021 In this book the author explores the shifting philosophical boundaries of modern medical knowledge and practice occasioned by the crisis of quality-of-care, especially in terms of the various humanistic adjustments to the biomedical model. To that end he examines the metaphysical, epistemological, and ethical boundaries of these medical models. He begins with their metaphysics, analyzing the metaphysical positions and presuppositions and ontological commitments upon which medical knowledge and practice is founded. Next, he considers the epistemological issues that face these medical models, particularly those driven by methodological procedures undertaken by epistemic agents to constitute medical knowledge and practice. Finally, he examines the axiological boundaries and the ethical implications of each model, especially in terms of the physician-patient relationship. In a concluding Epilogue, he discusses how the philosophical analysis of the humanization of modern medicine helps to address the crisis-of-care, as well as the question of "What is medicine?" The book's unique features include a comprehensive coverage of the various topics in the philosophy of medicine that have emerged over the past several decades and a philosophical context for embedding bioethical discussions. The book's target audiences include both undergraduate and graduate students, as well as healthcare professionals and professional philosophers. "This book is the 99th issue of the Series Philosophy and Medicine...and it can be considered a crown of thirty years of intensive and dynamic discussion in the field. We are completely convinced that after its publication, it can be finally said that undoubtedly the philosophy of medicine exists as a special field of inquiry."

The Dynamics of Thought Jan 19 2022 This book is a selection from the articles that I have written over a period of more than twenty years. Since the focus of my research interests has shifted several times during this period, it would be difficult to identify a common theme for all the papers in the volume. Following the Swedish tradition, I therefore present this as a smörgåsbord of philosophical and cognitive issues that I have worked on. To create some order, I have organized the sixteen papers into five general sections: (1) Decision theory; (2) belief revision and nonmonotonic logic; (3) induction; (4) semantics and pragmatics; and (5) cognition and evolution. Having said this, I still think that there is a common theme to my work over the years: The dynamics of thought. My academic interests have all the time dealt with aspects of how different kinds of knowledge should be represented, and, in particular, how changes in knowledge will affect thinking. Hence the title of the book.

Language, Mind, and Art Feb 20 2022 This book is a collection of essays in honor of Paul Ziff written by his colleagues, students, and friends. Many of the authors address topics that Ziff has discussed in his writings: understanding, rules and regularities, proper names, the feelings of machines, expression, and aesthetic experience. Paul Ziff began his professional career as an artist, went on to study painting with J. M. Hanson at Cornell, and then studied for the Ph. D. in philosophy, also at Cornell, with Max Black. Over the next three decades he produced a series of remarkable papers in philosophy of art, culminating in 1984 with the publication of *Antiaesthetics: An Appreciation of the Cow with the Subtile Nose*. In 1960 he published *Semantic Analysis*, his masterwork in philosophy of language. Throughout his career he made important contributions to philosophy of mind in such papers as "The Simplicity of Other Minds" (1965) and "About Behaviourism" (1958). In addition to his work in these areas, his lectures at Harvard on philosophy of religion are an underground classic; and throughout his career he has continued to make art and to search for the meaning of life in the properties of prime numbers. Although his interests are wide and deep, questions about language, art, and mind have dominated his philosophical work, and it is problems in these areas that provide the topics of most of the essays in this volume.

Inverse Problems in Scattering Sep 22 2019 Inverse Problems in Scattering exposes some of the

mathematics which has been developed in attempts to solve the one-dimensional inverse scattering problem. Layered media are treated in Chapters 1--6 and quantum mechanical models in Chapters 7--10. Thus, Chapters 2 and 6 show the connections between matrix theory, Schur's lemma in complex analysis, the Levinson--Durbin algorithm, filter theory, moment problems and orthogonal polynomials. The chapters devoted to the simplest inverse scattering problems in quantum mechanics show how the Gel'fand--Levitan and Marchenko equations arose. The introduction to this problem is an excursion through the inverse problem related to a finite difference version of Schrödinger's equation. One of the basic problems in inverse quantum scattering is to determine what conditions must be imposed on the scattering data to ensure that they correspond to a regular potential, which involves Lebesgue integrable functions, which are introduced in Chapter 9.

Blameworthy Belief Jul 25 2022 Believing the wrong thing can have drastic consequences. The question of when a person is not only ill-guided, but genuinely at fault for holding a particular belief goes to the root of our understanding of such notions as criminal negligence and moral responsibility. This book explores the conditions under which someone may be deemed blameworthy for holding a particular belief, drawing on contemporary epistemology, ethics and legal scholarship.

Collected Papers of Stig Kanger with Essays on his Life and Work Nov 17 2021 Stig Kanger (1924-1988) made important contributions to logic and formal philosophy. Kanger's dissertation *Provability in Logic*, 1957, contained significant results in proof theory as well as the first fully worked out model-theoretic interpretation of quantified modal logic. It is generally accepted nowadays that Kanger was one of the originators of possible worlds semantics for modal logic. Kanger's most original achievements were in the areas of general proof theory, the semantics of modal and deontic logic, and the logical analysis of the concept of rights. He also contributed to action theory, preference logic, and the theory of measurement. This is the first of two volumes dedicated to the work of Stig Kanger. The present volume is a complete collection of Kanger's philosophical papers. The second volume contains critical essays on Kanger's work, as well as biographical essays on Kanger written by colleagues and friends.

Other Minds Apr 22 2022 This book has been a long time in the making. Other issues have taken me away from it from time to extended time. But I kept coming back to the problem of other minds. It has remained a great issue, it is much contested still, and it is, after all, close to us all. I like believing that the time taken has deepened my understanding of the problem and how it is to be handled. Other people, some by disagreeing vehemently, have helped greatly. I mention in particular, Brian Ellis, Robert Fox, Graeme Marshali, Tim Oakley, Ray Pinkerton and Robert Young. Robert Pargetter argued with me, and kept insisting that I write this book. John Bigelow, Michael Bradley, Keith Campbell, Frank Jackson, and William Lycan assisted by reading an earlier version and providing valued comments. Frank Jackson has been specially helpful, not just on this topic. He can be blamed for initially causing me to take the analogical inference seriously. The La Trobe Philosophy Department has been a good place to do philosophy. I am grateful to Suzanne Hayster, Sandra Paul, and Betty Pritchard for struggling at various times with various recalcitrant manuscripts. Most particularly I thank Gai Larkin. She has seen the project through, with considerably more than efficiency.

The Ethics of Managed Care: Professional Integrity and Patient Rights Sep 15 2021 This collection provides a philosophical and historical analysis of the development and current situation of managed care. It discusses the relationship between physician professionalism and patient rights to affordable, high quality care. Its special feature is its depth of analysis as the philosophical, social, and economic issues of managed care are developed. It will be of interest to educated readers in their role as patients and to all levels of medical and health care professionals.

Subject Guide to Australian Business, Commerce & Law Books Sep 27 2022 A guide to the 5490 books in these fields in the 'Australian Books in Print' database as at June 1992, and out-of-print titles notified since December 1989, with titles indexed under 3617 subject headings.

Medieval Scholarship: Biographical Studies on the Formation of a Discipline Mar 09 2021 First published in 1998. *Medieval Scholarship: Biographical Studies on the Formation of a Discipline: Volume 2: Literature and Philology* is the second volume of three that present Biographies of scholars whose work influenced the study of the Middle Ages and transformed it into the discipline known as Medieval Studies. Volume 2 provides thirty~two accounts of men and women from the sixteenth century to the twentieth who developed medieval philology and literature into a profession. Their subject deals with the languages and literatures of greater Europe from about the seventh century

through the fifteenth and includes Celtic, Scandinavian, Germanic, and Romance nations.

Christian Responses to the Holocaust Dec 26 2019 Delineates the roles that individuals and their churches played in confronting Hitler. Written by both Jewish and Christian scholars, these essays focus on the Christian responses to Nazism and delineate the roles that individuals and their churches played in confronting Hitler.

Mechanics of Composite Materials Oct 24 2019 Everyone involved with the mechanics of composite materials and structures must have come across the works of Dr. N.J. Pagano in their research. His research papers are among the most referenced of all existing literature in the field of mechanics of composite materials. This monograph makes available, in one volume, all Dr. Pagano's major technical papers. Most of the papers included in this volume have been published in the open literature, but there are a few exceptions -- a few key, unpublished reports have been included for continuity. The topics are: some basic studies of anisotropic behavior, exact solutions for elastic response, role of micromechanics, and some carbon--carbon spinoffs. The volume can be used as a reference book by researchers in academia, industry, and government laboratories, and it can be used as a reference text for a graduate course on the mechanics of composite materials.

Making Harvard Modern May 11 2021 Making Harvard Modern is a candid, richly detailed portrait of America's most prominent university from 1933 to the present: seven decades of dramatic change. Early twentieth century Harvard was the country's oldest and richest university, but not necessarily its outstanding one. By the century's end it was widely regarded as the nation's, and the world's, leading institution of higher education. With verve, humor, and insight, Morton and Phyllis Keller tell the story of that rise: a tale of compelling personalities, notable achievement and no less notable academic pratfalls. Their book is based on rich and revealing archival materials, interviews, and personal experience. Young, humbly born James Bryant Conant succeeded Boston Brahmin A. Lawrence Lowell as Harvard's president in 1933, and set out to change a Brahmin-dominated university into a meritocratic one. He hoped to recruit the nation's finest scholars and an outstanding national student body. But the lack of new money during the Depression and the distractions of World War Two kept Conant, and Harvard, from achieving this goal. In the 1950s and 1960s, during the presidency of Conant's successor Nathan Marsh Pusey, Harvard raised the money, recruited the faculty, and attracted the students that made it a great meritocratic institution: America's university. The authors provide the fullest account yet of this transformation, and of the wrenching campus crisis of the late 'sixties. During the last thirty years of the twentieth century, a new academic culture arose: meritocratic Harvard morphed into worldly Harvard. During the presidencies of Derek Bok and Neil Rudenstine the university opened its doors to growing numbers of foreign students, women, African- and Asian-Americans, and Hispanics. Its administration, faculty, and students became more deeply engaged in social issues; its scientists and professional schools were more ready to enter into shared commercial ventures. But worldliness brought its own conflicts: over affirmative action and political correctness, over commercialization, over the ever higher costs of higher education. This fascinating account, the first comprehensive history of a modern American university, is essential reading for anyone with an interest in the present state and future course of higher education.

New Testament Commentary Survey Dec 06 2020 Provides pastors and students with expert guidance on choosing a commentary for any book of the New Testament.

Abductive Reasoning Oct 16 2021 Abductive Reasoning: Logical Investigations into Discovery and Explanation is a much awaited original contribution to the study of abductive reasoning, providing logical foundations and a rich sample of pertinent applications. Divided into three parts on the conceptual framework, the logical foundations, and the applications, this monograph takes the reader for a comprehensive and erudite tour through the taxonomy of abductive reasoning, via the logical workings of abductive inference ending with applications pertinent to scientific explanation, empirical progress, pragmatism and belief revision.

Mechanical Behaviour of Materials Jun 19 2019 Designing new structural materials, extending lifetimes and guarding against fracture in service are among the preoccupations of engineers, and to deal with these they need to have command of the mechanics of material behaviour. The first volume of this two-volume work deals with elastic and elastoplastic behaviour; this second volume continues with viscoelasticity, damage, fracture (resistance to cracking) and contact mechanics. As in Volume I, the treatment starts from the active mechanisms on the microscopic scale and develops the laws of macroscopic behaviour. Chapter I deals with viscoplastic behaviour, as shown, for example, at low

temperatures by the effects of oscillatory loads and at high temperatures by creep under steady load. Chapter 2 treats damage phenomena encountered in all materials - for example, metals, polymers, glasses, concretes - such as cavitation, fatigue and stress-corrosion cracking. Chapter 3 treats those concepts of fracture mechanics that are needed for the understanding of resistance to cracking and Chapter 4 completes the volume with a survey of the main concepts of contact mechanics. As with Volume I, each chapter has a set of exercises, either with solutions or with indications of how to attack the problem; and there are many explanatory diagrams and other illustrations.

Thin-Walled Composite Beams Jul 01 2020 This is the first monograph devoted to the foundation of the theory of composite anisotropic thin-walled beams and to its applications in various problems involving the aeronautical/aerospace, helicopter, naval and mechanical structures. Throughout the theoretical part, an effort was made to provide the treatment of the subject by using the equations of the 3-D elasticity theory. Non-classical effects such as transverse shear, warping constraint, anisotropy of constituent materials yielding the coupling of twist-bending (lateral), bending (transversal)-extension have been included and their implications have been thoroughly analyzed. Thermal effects have been included and in order to be able to circumvent their deleterious effects, functionally graded materials have been considered in their construction. Implications of the application of the tailoring technique and of the active feedback control on free vibration, dynamic response, instability and aeroelasticity of such structures have been amply investigated. Special care was exercised throughout this work to address and validate the adopted solution methodologies and the obtained results against those available in the literature and obtained via numerical or experimental means.

IUTAM Symposium on Smart Structures and Structronic Systems Apr 29 2020 Proceedings of the IUTAM Symposium on Smart Structures and Structronic Systems, held in Magdeburg, Germany, 26-29 September 2000

IUTAM Symposium on Rheology of Bodies with Defects Aug 22 2019 The IUTAM Symposium on Rheology of Bodies with Defects was held in Beijing in September, 1997. It was aimed at the development of Rheology in Solid Mechanics. Rheology is classified in Applied Mechanics Review under fluid mechanics, however, in its broadest content as was envisaged in its earlier days, it covers the whole spectrum of material behavior from elasticity, plasticity, and fluid mechanics to gas dynamics. It was thought of as a branch of continuum mechanics, but emphasized the physical aspects of different materials, and frequently proceeded from basic physical principles. As the temperature rises, the distinction between solid and fluid, and the distinction between their micro-mechanical movements, become blurred. The physical description of such materials and their movements must be based on the thermodynamic principles of state variable theory; the classical division between solid and fluid mechanics disappears. Under the classification adopted by Applied Mechanics Reviews, the subjects dealt with in this symposium come closer to viscoelasticity and viscoplasticity, especially close to the subdivision of creep dealing with creep rupture. The symposium focused at building a bridge between macroscopic and microscopic research on damage and fracture behavior of defective bodies made of metal, polymer, composite and other viscoelastic materials. Two different approaches are presented at the symposium. The first is a continuum damage theory for time-dependent evolution of defects at the macro/meso/microscopic levels.

The Carole: A Study of a Medieval Dance Oct 04 2020 The carole was the principal social dance in France and England from c. 1100 to c. 1400 and was frequently mentioned in French and English medieval literature. However, it has been widely misunderstood by contributors in recent citations in dictionaries and reference books, both linguistic and musical. The carole was performed by all classes of society - kings and nobles, shepherds and servant girls. It is described as taking place both indoors and outdoors. Its central position in the life of the people is underlined by references not only in what we might call fictional texts, but also in historical (or quasi-historical) writings, in moral treatises and even in a work on astronomy. Dr Robert Mullally's focus is very much on details relevant to the history, choreography and performance of the dance as revealed in the primary sources. This methodology involves attempting to isolate the term carole from other dance terms not only in French, but also in other languages. Mullally's groundbreaking study establishes all the characteristics of this dance: etymological, choreographical, lyrical, musical and iconographical.

Quantifiers: Logics, Models and Computation May 23 2022 This volume contains a collection of research papers centered around the concept of quantifier. Recently this concept has become the central point of research in logic. It is one of the important logical concepts whose exact domain and applications have so far been insufficiently explored, especially in the area of inferential and semantic properties of languages. It should thus remain the central point of research in the future. Moreover, during the last twenty years generalized quantifiers and logical technics based on them have proved their utility in various applications. The example of natural language semantics has been particularly striking. For a long time it has been believed that elementary logic also called first-order logic was an adequate theory of logical forms of natural language sentences. Recently it has been accepted that semantics of many natural language constructions can not be properly represented in elementary logic. It has turned out, however, that they can be described by means of generalized quantifiers. As far as computational applications of logic are concerned, particularly interesting are semantics restricted to finite models. Under this restriction elementary logic loses several of its advantages such as axiomatizability and compactness. And for various purposes we can use equally well some semantically richer languages of which generalized quantifiers offer the most universal methods of describing extensions of elementary logic. Moreover we can look at generalized quantifiers as an explication of some specific mathematical concepts, e. g.

Parallel Robots May 31 2020 Parallel robots are closed-loop mechanisms presenting very good performances in terms of accuracy, rigidity and ability to manipulate large loads. Parallel robots have been used in a large number of applications ranging from astronomy to flight simulators and are becoming increasingly popular in the field of machine-tool industry. This book presents a complete synthesis of the latest results on the possible mechanical architectures, analysis and synthesis of this type of mechanism. It is intended to be used by students (with over 100 exercises and numerous Internet addresses), researchers (with over 500 references and anonymous ftp access to the code of some algorithms presented in this book) and engineers (for which practical results and applications are presented).

Glossary of Oceanographic Terms Aug 26 2022 This resource attempts to provide general definitions of technical terms used in oceanography and allied marine sciences.
