Book of Abstracts of the 62nd Annual Meeting of the European Association for Animal Production Dec 18 2021 This Book of Abstracts is the main publication of the 62nd Annual Meeting of the European Association for Animal Production (EAAP) held in Stavanger, Norway from 29 August - 2 September 2011. It contains abstracts of the invited papers and contributed presentations. The meeting addressed subjects relating to science and innovation. Also, important problems were discussed during the sessions of EAAP's nine Commissions: Animal Genetics, Animal Nutrition, Animal Management and Health, Animal Physiology, Cattle Production, Sheep and Goat Production, Pig Production, Horse Production and Livestock Farming Systems. In addition joint sessions on topics interesting several disciplines and species were included in the programme.

Revolution im Stall Oct 04 2020 Im Stall von 1990 erinnerte wenig an das dortige Geschehen vierzig Jahre zuvor. Neue Tiere produzierten die begehrtesten Lebensmittel der Konsumgesellschaft, Fleisch, Milch und Eier, so günstig wie noch nie. Gleichzeitig verschwanden sie hinter die Kulissen des gesellschaftlichen Lebens. In beiden deutschen Staaten sahen Agrarpolitik, Tierzucht, Tiermedizin, Agrarwissenschaft und die Bauern und Bäuerinnen vor Ort in einer Rationalisierung der Tierhaltung die vielversprechendste Möglichkeit, Anschluss an die Entwicklungen der Wohlstandsgesellschaft zu halten. Veronika Settele untersucht die Entwicklung der industrialisierten Massentierhaltung und zeigt dabei zugleich, warum sie trotz ihrer enormen ökonomischen Erfolge seit den 1970er Jahren Gegenstand einer kritischen Diskussion wurde. "Revolution im Stall" ist mit dem Förderpreis Opus Primum der VolkswagenStiftung 2020 für die beste wissenschaftliche

Nachwuchspublikation ausgezeichnet worden.

The Port of Savannah Jun 19 2019

The Gourmet Butcher's Guide to Meat Aug 14 2021 A comprehensive guide to whole-animal butchery, covering the rudiments of butchery; how meat animals are raised, slaughtered, and marketed; and the complexities of meat grading, carcass yield, marbling scores, and issues with inspection.

[Art and Science in Breeding](#) Apr 10 2021 Chickens are now the most scientifically engineered of livestock. How have the methods used by geneticists differed from those employed by domestic breeders over time? *Art and Science in Breeding* details the relationship between farm practices and agricultural genetics in poultry breeding from 1850 to 1960. Margaret E. Derry traces the history and organization of chicken breeding in North America, from craft approaches and breeding as an 'art,' to the conflicts that had emerged between traditional and scientific methods by the 1940s. Derry assesses links between the 'scientific' revolution of chicken farming and the development of corporate breeding as a modern, international industry. Using poultry as a case study for the wider narrative of agricultural genetics, *Art and Science in Breeding* adds considerable knowledge to a rapidly growing field of inquiry.

Commercial Chicken Meat and Egg Production May 11 2021

Commercial Chicken Meat and Egg Production is the 5th edition of a highly successful book first authored by Dr. Mack O. North in 1972, updated in 1978 and 1984. The 4th edition was co-authored with Donald D. Bell in 1990. The book has achieved international success as a reference for students and commercial poultry and egg producers in every major poultry producing country in the world. The 5th edition is essential reading for students preparing to enter the poultry industry, for owners and managers of existing poultry companies and for scientists who need a major source of scientifically based material on poultry management. In earlier editions, the authors emphasized the chicken and its management. The 5th edition, with the emphasis shifted to the commercial business of managing poultry, contains over 75% new

material. The contributions of 14 new authors make this new edition the most comprehensive such book available. Since extensive references are made to the international aspects of poultry management, all data are presented in both the Imperial and Metric form. Over 300 tables and 250 photos and figures support 62 chapters of text. New areas include processing of poultry and eggs with thorough discussions of food safety and further processing. The business of maintaining poultry is discussed in chapters on economics, model production firms, the use of computers, and record keeping. Updated topics include: breeders and hatchery operations; broiler and layer flock management; replacement programs and management of replacements; nutrition; and flock health. New chapters address flock behavior, ventilation, waste management, egg quality and egg breakage. Other new features include a list of more than 400 references and a Master List of the tables, figures, manufacturers of equipment and supplies, research institutions, books and periodicals, breeders, and trade associations. Commercial growers will find the tables of data of particular interest; scientists will be able to utilize the extensive references and to relate their areas of interest to the commercial industry's applications; and students will find that the division of the book into 11 distinct sections, with multiple chapters in each, will make the text especially useful.

Vegan for Life Apr 29 2020 The comprehensive guide for optimal plant-based nutrition at every stage of life, now completely updated. Are you considering going vegan, but not sure how to start? Are you already committed to an animal-free diet, but are unclear about how to get proper nutrients? Vegan for Life is your comprehensive, go-to guide for optimal plant-based nutrition. Registered dietitians and long-time vegans Jack Norris and Virginia Messina debunk some of the most persistent myths about vegan nutrition and provide essential information about getting enough calcium and protein, finding the best supplements, and understanding the "real deal" about organics, processed foods, raw foods, and more. Now, ten years since its original publication, the book has been completely revised and updated, with: A brand-new chapter on vegan eating for weight management Guidance on eating to prevent chronic disease The latest findings on sports nutrition and muscle mass Easy-to-follow vegan food guides, menus, and pantry lists Covering everything from a six-step transition plan to meeting calorie and nutrient needs during every stage of life, Vegan for Life is the guide for aspiring and veteran vegans alike.

Arthur's Veterinary Reproduction and Obstetrics - E-Book Jul 25 2022 As the standard theriogenology text for veterinary students, Veterinary Reproduction and Obstetrics is also a great reference to keep post-graduation. The 10th edition of this book has been thoroughly updated to include normal reproduction and reproductive disorders, as well as diseases in the common and less common domestic species (dogs, cats, pigs, and horses as well as llamas, alpacas, and camels). This sorely

needed information is vital for practicing in underdeveloped countries which lack the technology, equipment, and personnel offered in the U.S. With many international contributing authors, this one-of-a-kind text includes developments in reproductive biology and endocrinology from across the globe. Only textbook covering all major domestic mammalian species ensures you get consistent, authoritative advice on all species that experience challenges related to reproduction and obstetrics. Only book available that covers all aspects of theriogenology in all major domestic mammalian species recognizes the importance of species from every inch of the globe. A practical, clinical approach to the content provides you with the instruction you need to improve your clinical proficiency. Comparative aspects of theriogenology and obstetrics helps you to see beyond your species of immediate interest, and broaden your scope of knowledge and understanding of the discipline. Consistent leadership of David Noakes through nine previous editions makes this the most highly regarded text worldwide in this genre. NEW! Extensive coverage of less-common domestic species prepares you to work with these animals in developing countries where they're more common. NEW! Black and white images replaced with color pictures to optimize full-color design and demonstrate specific techniques. NEW! Additional international contributors provide you with a global, multi-faceted perspective on a variety of species.

Eating to Extinction Jan 27 2020 A New York Times Book Review Editors' Choice What Saladino finds in his adventures are people with soul-deep relationships to their food. This is not the decadence or the preciousness we might associate with a word like "foodie," but a form of reverence . . . Enchanting." —Molly Young, The New York Times Dan Saladino's *Eating to Extinction* is the prominent broadcaster's pathbreaking tour of the world's vanishing foods and his argument for why they matter now more than ever Over the past several decades, globalization has homogenized what we eat, and done so ruthlessly. The numbers are stark: Of the

roughly six thousand different plants once consumed by human beings, only nine remain major staples today. Just three of these—rice, wheat, and corn—now provide fifty percent of all our calories. Dig deeper and the trends are more worrisome still: The source of much of the world's food—seeds—is mostly in the control of just four corporations. Ninety-five percent of milk consumed in the United States comes from a single breed of cow. Half of all the world's cheese is made with bacteria or enzymes made by one company. And one in four beers drunk around the world is the product of one brewer. If it strikes you that everything is starting to taste the same wherever you are in the world, you're by no means alone. This matters: when we lose diversity and foods become endangered, we not only risk the loss of traditional foodways, but also of flavors, smells, and textures that may never be experienced again. And the consolidation of our food has other steep costs, including a lack of resilience in the face of climate change, pests, and parasites. Our food monoculture is a threat to our health—and to the planet. In *Eating to Extinction*, the distinguished BBC food journalist Dan Saladino travels the world to experience and document our most at-risk foods before it's too late. He tells the fascinating stories of the people who continue to cultivate, forage, hunt, cook, and consume what the rest of us have forgotten or didn't even know existed. Take honey—not the familiar product sold in plastic bottles, but the wild honey gathered by the Hadza people of East Africa, whose diet consists of eight hundred different plants and animals and who communicate with birds in order to locate bees' nests. Or consider murnong—once the staple food of Aboriginal Australians, this small root vegetable with the sweet taste of coconut is undergoing a revival after nearly being driven to extinction. And in Sierra Leone, there are just a few surviving stenophylla trees, a plant species now considered crucial to the future of coffee. From an Indigenous American chef refining precolonial recipes to farmers tending Geechee red peas on the Sea Islands of Georgia, the individuals profiled in *Eating to Extinction* are essential guides to treasured foods that have endured in the face of rampant sameness and standardization. They also provide a roadmap to a food system that is healthier, more robust, and,

above all, richer in flavor and meaning.

Jan 19 2022

Genetic Improvement of Farmed Animals Oct 16 2021 Genetic Improvement of Farmed Animals provides a thorough grounding in the basic sciences underpinning farmed animal breeding. Relating science to practical application, it covers all the major farmed animal species: cattle, sheep, goats, poultry, pigs and aquaculture species.

Animal production and animal science worldwide Dec 06 2020 This World Association for Animal Production (WAAP) Book of the Year series, now in its fourth volume, grows each year in its popularity. The authors are selected for their expertise in a specific field of the animal science. It is intended to constantly update animal scientists, industry representatives, animal breeders and extension service personnel with all the aspects considered relevant in each specific field of animal science. The book offers an updated and complete picture of the animal industry and of livestock science worldwide. We maintain the book's successful four section structure for easy access to the information. The first section of the book deals with livestock industry and possible application of research developments in the various continents. The following section reports updates about development of research in the various disciplines in the entire animal science field. The third section contains interesting articles on 'free subjects', of broad interest. We were told by readers of the previous volumes that this is the most popular section for the variety of actual and interesting topics for readers. The final section shows, like every year, detailed statistics of extraordinary importance in the animal industry. This book is generally recognized as one of the very few practical resources of comprehensive statistical information related to animal industry and it is considered by most important libraries to be a key instrument to offer their readers high-quality, updated relevant information on global animal science developments.

Chicken May 31 2020 Why has the chicken become the meat par excellence, the most plentifully eaten and popular animal protein in the

world, consumed from Beijing to Barcelona? As renowned historian Paul Josephson shows, the story of the chicken's rise involves a whole host of factors; from art, to nineteenth-century migration patterns to cold-war geopolitics. And whereas sheep needed too much space, or the cow was difficult to transport, these compact, lightweight birds produced relatively little waste, were easy to transport and could happily peck away in any urban back garden. Josephson tells this story from all sides: the transformation of the chicken from backyard scratcher to hyper-efficient industrial meat-product has been achieved due to the skill of entrepreneurs who first recognized the possibilities of chicken meat and the gene scientists who bred the plumpest and most fertile birds. But it has also been forced through by ruthless capitalists and lobbyists for “big farmer”, at the expense of animal welfare and the environment. With no sign of our lust for chicken abating, we're now reaching a crisis point: billions of birds are slaughtered every year, after having lived lives that are nasty, brutish and short. The waste from these victims is polluting rivers and poisoning animals. We're now plunging “egg-first” into environmental disaster. Alongside this story Josephson tells another, of an animal with endearing characteristics who, arguably, can lay claim to being man's best friend long before the dog reared its snout or the cat came in from the cold. Lionized in medieval romances and modern cartoons, the chicken's relationship to humanity runs deep; by treating these animals as mere food products, we become less than human. *The Rights of Nature* Jul 01 2020 An important and timely recipe for hope for humans and all forms of life Palila v Hawaii. New Zealand's Te Urewera Act. Sierra Club v Disney. These legal phrases hardly sound like the makings of a revolution, but beyond the headlines portending environmental catastrophes, a movement of immense import has been building Ñ in courtrooms, legislatures, and communities across the globe. Cultures and laws are transforming to provide a powerful new approach to protecting the planet and the species with whom we share it. Lawyers from California to New York are fighting to gain legal rights for chimpanzees and killer whales, and lawmakers are ending the era of keeping these intelligent animals in captivity. In Hawaii and India, judges

have recognized that endangered species Ñ from birds to lions Ñ have the legal right to exist. Around the world, more and more laws are being passed recognizing that ecosystems Ñ rivers, forests, mountains, and more Ñ have legally enforceable rights. And if nature has rights, then humans have responsibilities. In *The Rights of Nature*, noted environmental lawyer David Boyd tells this remarkable story, which is, at its heart, one of humans as a species finally growing up. Read this book and your world view will be altered forever.

[Alternative Systems for Poultry](#) Mar 09 2021 Recent interest in how poultry are housed and managed in order to ensure profitability, sustainability, and good levels of animal welfare, are challenging issues that commercial poultry keepers face, particularly where legislation is bringing about legal requirements for housing. This book compares and contrasts alternative housing with conventional and traditional systems for commercial poultry (laying hens, meat chickens, turkeys, waterfowl and gamebirds) with regards to welfare, disease, health, nutrition, sustainability and genotype-environment interaction.

Nutritional Modelling for Pigs and Poultry Sep 15 2021 Modelling is a useful tool for decision making in complex agro-industrial scenarios. Containing a selection of the papers presented at the International Symposium of Modelling in Pig and Poultry Production 2013, this book brings together the best and most recent academic work on modelling in the pig and poultry industry, with a particular emphasis on nutrition. It reviews basic modelling concepts, descriptions and applications of production models and new methods and approaches in modelling.

Marek's Disease Mar 29 2020 Marek's disease is a form of cancer of poultry caused by an important herpesvirus (MDV). It continues to be a threat to poultry health and welfare and worldwide losses are estimated to be US\$ 1 billion annually. Marek's Disease provides a timely review of the problems of Marek's disease with descriptions of the complex viral life cycle, how MDV targets different types of white blood cells, and details of the virus structure, its genes and proteins. The multiplicity of factors contributing to susceptibility is explored in detail Vaccination - the problems arising from current vaccination strategies and how these can be improved and made sustainable in future The lessons learned in the control of MD over the past 30 years, and how we can use MD as a model for other animal and human diseases is discussed

Who's who in the Egg and Poultry Industries in the United States and Canada Nov 17 2021

Animal Breeding, Welfare and Society Jun 12 2021 The determination of when, how, how often and with whom an animal breeds has moved away from evolutionary pressures towards our own purposes: these include the breeding and use of around 50 billion mammals and birds for food production annually, the breeding of pedigree dogs, cats, racing dogs and horses, specialized laboratory animal strains and the use of reproductive science to breed endangered species in zoos and to attempt to limit unwanted populations of pests and non-native species. This book discusses the methods, the motivations and the consequences of human intervention in animal breeding in terms of what we know about animal behavior and well-being. It sets out to challenge both our practice and our assumptions- those of society as a whole and the many professionals involved in the worldwide animal reproduction business. It explores

Food Waste Recovery Sep 03 2020 Food Waste Recovery: Processing Technologies, Industrial Techniques, and Applications, Second Edition provides information on safe and economical strategies for the recapture of value compounds from food wastes while also exploring their re-utilization in fortifying foods and as ingredients in commercial products. Sections discuss the exploration of management options, different sources, the Universal Recovery Strategy, conventional and emerging technologies, and commercialization issues that target applications of recovered compounds in the food and cosmetics industries. This book is a valuable resource for food scientists, technologists, engineers, chemists, product developers, researchers, academics and professionals working in the food industry. Covers food waste management within the food industry by developing recovery strategies Provides coverage of processing technologies and industrial techniques for the recovery of valuable compounds from food processing by-products Explores the different applications of compounds recovered from food processing using three approaches: targeting by-products, targeting ingredients, and targeting bioactive applications

Poultry Feathers and Skin Oct 28 2022 The feathers and skin in birds are the first line of defence, but are also important in helping the bird to maintain a stable internal temperature, facilitate integral mobility and ensure successful mating in some species. For poultry, the physical conditions of feathers and skin are important barometers to assess the impact of management and ensure health and welfare. Based on the proceedings of a recent symposium, this book documents the significant developments that have been made in our understanding of the importance of the integument to poultry species. The book: Traces the development of the integument over time and discusses our current understanding of its embryonic development. Includes a broad range of studies covering genetics, welfare, health, nutrition, and management.

Promotes research opportunities in an under-studied field. Providing a comprehensive yet concise summary of the available research, this book is an invaluable resource for both the poultry industry and for researchers in animal science and welfare at undergraduate and graduate levels.

Plucked! Aug 02 2020 'This is an important book. You can't understand the radical cheapening of food, with all its unpleasant effects, for farm animals and our most cherished rural landscapes, until you begin to understand the industrialisation of chicken. Industrial chicken is now displacing many more sustainable farming systems, driving them out of business. This book explains how that happened and why we should all be worried about it and demand change' James Rebanks, author of *The Shepherd's Life* Plucked! examines everything that has gone wrong in

the modern agricultural system: overuse of antibiotics, threats to the environment, violations of animal welfare, destruction of farming communities, disruption of international trade and delivery of over-processed, obesity-promoting, nutritionally hollow food. Drawing on years of research into the 'big chicken' industry, acclaimed science writer Maryn McKenna uncovers the people searching for solutions and seeking to return chicken to a sustainable and honoured place on our plate and asking whether, with reform, chicken can safely feed the world. Rich with characters who together propelled the story of chicken's unintended consequences, Plucked! will reveal how the antibiotic era created modern agriculture. It is an eye-opening exploration of how the world's most popular meat came to define so much more than just chicken nuggets.
