The Politics of Childhoods Real and Imagined Apr 28 2020 The second volume of Priscilla Alderson's popular and renowned book *Childhoods Real and Imagined* relates dialectical critical realism to childhood. By demonstrating their relevance and value to each other, Alderson presents a practical introductory guide for applying critical realism to research about children and young people. Each chapter summarises key themes from several academic disciplines and policy areas, ranging from climate change and social justice between generations, to neoliberalism, social reform and imagining utopias.

and experiences are reviewed, and whereas the first volume deals with more personal and local aspects of childhood, this volume widens the scope into debates about global politics, which so seldom mention children. Each chapter demonstrates how children and young people are an integral part of the whole of society and are often especially affected by policies and events. This book is written for everyone who is researching, studying or teaching about childhood, or who cares for and works with children and young people, as well as those interested in critical realist approaches. *Geoengineering, Persuasion, and the Climate Crisis* Mar 08 2021 A rhetorical exploration

of an underexamined side of climate change—the ongoing research into and development of geoengineering strategies *Geoengineering, Persuasion, and the Climate Crisis: A Geologic Rhetoric* exposes the deeply worrying state of discourse over geoengineering—the intentional manipulation of the earth's climate as means to halt or reverse global warming. These climate-altering projects, which range from cloud-whitening to carbon dioxide removal and from stratospheric aerosol injection to enhanced weathering, are all technological solutions to more complex geosocial problems. *Geoengineering* represents one of the most alarming forms of

deliberative discourse in the twenty-first century. Yet geoengineering could easily generate as much harm as the environmental traumas it seeks to cure. Complicating these deliberations is the scarcity of public discussion. Most deliberations transpire within policy groups, behind the closed doors of climate-oriented startups, between subject-matter experts at scientific conferences, or in the disciplinary jargon of research journals. Further, much of this conversation occurs primarily in the West. Ehren Helmut Pflugfelder makes clear how the deliberative rhetorical strategies coming from geoengineering advocates have been largely deceptive, hegemonic, deterministic, and exploitative. In this volume, he investigates how geoengineering proponents marshal geologic actors into their arguments—and how current discourse could lead to a greater exploitation of the earth in the future.

Pflugfelder's goal is to understand the structure, content, purpose, and effect of these discourses, raise the alarm about their deliberative directions, and help us rethink our approach to the climate. In highlighting both the inherent problems of the discourses and the ways geologic rhetoric can be made productive, he attempts to give "the geologic" a place at the table to better understand the roles that all earth systems continue to play in our lives, now and for years to come.

Anthropology and Climate

Change Feb 07 2021 The first edition of Anthropology and Climate Change (2009) pioneered the study of climate change through the lens of anthropology, covering the relation between human cultures and the environment from prehistoric times to the present. This second, heavily revised edition brings the material on this rapidly changing field completely up to date, with major scholars from around the world mapping out trajectories of research and issuing specific calls for action. The new edition introduces new "foundational" chapters—laying out what anthropologists know about climate change today, new theoretical and practical perspectives, insights gleaned from sociology, and international efforts to study and curb climate change—making the volume a perfect introductory textbook; presents a series of case studies—both new case studies and old ones updated and viewed with fresh eyes—with the specific purpose of assessing climate trends; provides a close look at how climate change is affecting livelihoods, especially in the context of economic

globalization and the migration of youth from rural to urban areas; expands coverage to England, the Amazon, the Marshall Islands, Tanzania, and Ethiopia; re-examines the conclusions and recommendations of the first volume, refining our knowledge of what we do and do not know about climate change and what we can do to adapt.

Wie Menschen entscheiden

Sep 14 2021 Wir Menschen müssen täglich eine Vielzahl von Entscheidungen treffen. Dabei wollen wir optimal, nicht widersprüchlich und möglichst ohne unerwünschte Beeinflussung von außen entscheiden. Manchmal sollen unsere Entscheidungen zusätzlich noch hehren gesellschaftlichen und/oder nachhaltigen Zielen genügen. Unsere Ansprüche und die Wirklichkeit klaffen jedoch oft weit auseinander. Das gilt dann noch verstärkt, wenn wir z. B. als Manager oder Politiker für andere Entscheidungen treffen sollen. Die wissenschaftlich belegten Hintergründe für unser Scheitern sind uns oft nicht bekannt und das Bewusstsein für die damit verbundenen Probleme ist wenig vorhanden. Das Buch erläutert eben jene Hintergründe und zeigt anhand anschaulicher, unterhaltsamer Praxisbeispiele die Bedeutung der Thematik. Darüber hinaus werden Leitlinien angeboten wie tendenziell "besser" entschieden werden kann.

close examination of the role of ecosystem-based adaptation in managing river basins, aquifers, flood plains and their vegetation to provide water storage and flood regulation. Furthermore, the book explores improved ecosystem-based services for managing floods, conservation of water and its resources (including watersheds), avoiding water scarcity, and ensuring long-term water security planning, all in the context of sustainable development goals. This book will help scientists pave the way for easy implementation of sustainable development goals, ensuring a secure and sustainable future. Presents information in an easy-to-follow manner using tables, figures and graphs where applicable, along with case studies from all continents Provides a reference for experts to use as an authoritative source to support environmental action and regulation Delineates the role of ecosystem-based adaptation in sustainable management and in the restoration of watershed forests and wetlands

Global Warming Gridlock Jun 11 2021 Global warming is one of today's greatest challenges. The science of climate change leaves no doubt that policies to cut emissions are overdue. Yet, after twenty years of international talks and treaties, the world is now in gridlock about how best to do this. David Victor argues that such gridlock has arisen because international talks have drifted away from the reality of what countries are willing and able to implement at home. Most of the lessons that policy makers

have drawn from the history of other international environmental problems won't actually work on the problem of global warming. Victor argues that a radical rethinking of global warming policy is required and shows how to make international law on global warming more effective. This book provides a roadmap to a lower carbon future based on encouraging bottom-up initiatives at national, regional and global levels, leveraging national self-interest rather than wishful thinking.

Netherlands Annual Review of Military Studies 2017 Mar 28 2020 International conflict resolution increasingly involves the use of non-military power and non-kinetic capabilities alongside military capabilities in the face of hybrid threats. In this book, counter-measures to those threats are addressed by academics with both practical and theoretical experience and knowledge, providing strategic and operational insights into non-kinetic conflict resolution and on the use of power to influence, affect, deter or coerce states and non-state actors. This volume in the NL ARMS series deals with the non-kinetic capabilities to address international crises and conflicts and as always views matters from a global perspective. Included are chapters on the promise, practice and challenges of non-kinetic instruments of power, the instrumentality of soft power, information as a power instrument and manoeuvring in the information environment, Russia's use of deception and misinformation in conflict,

applying counter-marketing techniques to fight ISIL, using statistics to profile terrorists, and employing tools such as Actor and Audience Analysis. Such diverse subjects as lawfare, the Law of Armed Conflict rules for non-kinetic cyber attacks, navigation warfare, GPS-spoofing, maritime interception operations, and finally, as a prerequisite, innovative ways for intelligence collection in UN Peacekeeping in Mali come up for discussion. The book will provide both professionals such as (foreign) policy makers and those active in the military services, academics at a master level and those with an interest in military law and the law of armed conflict with useful and up-to-date insights into the wide range of subjects that are contained within it. Paul A.L. Ducheine and Frans P.B. Osinga are General Officers and full professors at the Faculty of Military Sciences of the Netherlands Defence Academy in Breda, The Netherlands.

Experiment Earth Dec 25 2019 Experiments in geoengineering – intentionally manipulating the Earth’s climate to reduce global warming – have become the focus of a vital debate about responsible science and innovation. Drawing on three years of sociological research working with scientists on one of the world’s first major geoengineering projects, this book examines the politics of experimentation.

Geoengineering provides a test case for rethinking the responsibilities of scientists and asking how science can take better care of the futures that it helps bring about. This book gives students, researchers and the general reader interested in the place of science in contemporary society a compelling framework for future thinking and discussion.

Teaching Literature Aug 01 2020 This book comprises reflections by experienced scholar teachers on the principles and practice of higher education English teaching. In approaching the subject from different angles it aims to spark insights and to foster imaginative teaching. In the era of audit, and the Teaching Excellence Framework it invites teachers to return to the sources of their own teaching knowledge. The shift from a student-centred to a research-centred paradigm has particular implications for a discipline which prides itself on its teaching, and has always had teaching and dialogue at its heart. One which also talks across the tertiary / secondary border to the cognate (though different) subject called ‘English’ in school. The argument which informs this book, and which is developed in the individual chapters, is that the future of the subject relies not alone upon fostering communities of ‘research excellence’, but on re-awakening and reviving its pedagogic traditions.

Climate Change Solutions Nov 04 2020 Climate Change Solutions represents an application of critical theory to examine proposed solutions to climate change. Drawing from Marx’s negative conception of ideology, the authors illustrate

how ideology continues to conceal the capital-climate contradiction or the fundamental incompatibility between growth-dependent capitalism and effectively and justly mitigating climate change. Dominant solutions to climate change that offer minor changes to the current system fail to address this contradiction. However, alternatives like degrowth involve a shift in priorities and power relations and can offer new systemic arrangements that confront and move beyond the capital-climate contradiction. While there are clear barriers to a systemic transition that prioritizes social and ecological well-being, such a transition is possible and desirable.

Food Security Jun 30 2020 Throughout history, human societies have struggled to ensure that all people have access to sufficient food to lead active and healthy lives. Despite great global effort, events of the early 21st century clearly demonstrate that food remains a pressing challenge which has significant implications for security. In this book, Bryan McDonald explores how processes of globalization

and global change have reshaped food systems in ways that have significant impacts for the national security of states and the human of communities and individuals. Over the past few decades, local, regional, and national food systems have increasingly become intertwined in an emerging global food network. This complex web of relations includes the production, harvest, processing, transport, and consumption of food. While this global food network provides new opportunities for improving health and well-being, it also gives rise to new sources of security threats and vulnerabilities. This detailed and comprehensive introduction to the major issues impacting global food security will be essential reading for students and scholars in security studies, international politics, and environmental studies.

Global Surgery and Public Health Apr 09 2021 Until recently, surgical services in developing countries have been neglected, despite the critical role they could play in preventing disease and saving lives. Over the last few years, world leaders, public health professionals, and surgeons have collaborated to discuss public policies, resource utilization, healthcare reform, surgical safety, and workforce issues in order to bring these life-saving services to those most in need. Global Surgery and Public Health: A New Paradigm offers the most current information as well as a systematic approach to considering surgery in the context of a broader umbrella of public health. It is ideal for courses in Global/International Health, Public Health, Surgery, Medical Anthropology as well as for professionals in public policy and international health care and humanitarian groups serving the surgical needs of

Kirchenreform und betriebswirtschaftliches Denken

Jan 18 2022 Kirche leiten in Zeiten leerer Kassen Kirchenreform - unter diesem Stichwort werden seit rund zwei Jahrzehnten umfangreiche Rückbau-, Reorganisations- und Neuorientierungsprozesse verhandelt, zu denen sich die evangelische Kirche unter dem Vorzeichen leerer Kassen gezwungen sieht. Häufig sind es am betriebswirtschaftlichen Denken orientierte Analysen und Instrumente, mit deren Hilfe die Herausforderungen bewältigt werden sollen. Aber: Immer wieder führt dies in große Konflikte oder zu unbefriedigenden Ergebnissen. Warum ist das so? Christoph Meyns untersucht, was sich kirchliche Leitungsinstanzen im Bemühen um eine sinnvolle Anpassung der kirchlichen Arbeit an sinkende Ressourcen vom Einsatz betriebswirtschaftlicher Denkansätze und Methoden erhoffen dürfen und was nicht. Er macht sichtbar, wo ihr Einsatz begrenzt Sinn ergibt und wo er in Aporien führt. Und er zeigt, worin mögliche Alternativen bestehen. Warum

die evangelische Kirche bei der Bewältigung von Rückbauprozessen kaum von betriebswirtschaftlichen Analyseansätze und Methoden profitieren kann und welche Alternativen es gibt Eine fundierte, erfahrungssatte und eingängige Studie The Flooded Earth Sep 21 2019 Sea level rise will happen no matter what we do. Even if we stopped all carbon dioxide emissions today, the seas would rise one meter by 2050 and three meters by 2100. This -- not drought, species extinction, or excessive heat waves -- will be the most catastrophic effect of global warming. And it won't simply redraw our coastlines -- agriculture, electrical and fiber optic systems, and shipping will be changed forever. As icebound regions melt, new sources of oil, gas, minerals, and arable land will be revealed, as will fierce geopolitical battles over who owns the rights to them. In The Flooded Earth, species extinction expert Peter Ward describes in intricate detail what our world will look like in 2050, 2100, 2300, and beyond - a blueprint for a foreseeable future. Ward also explains what politicians and policymakers around the world should be doing now to head off the worst consequences of an inevitable transformation. changes due to such progress, it is far from certain that all of these changes will be for the better. The unprecedented rate of technological development that the 20th century witnessed has made our lives today vastly different from those in 1900. No slowdown is in sight, and the 21st century will most likely see even more revolutionary changes than the 20th, due to advances in science, technology and medicine. Particular areas where extraordinary and perhaps disruptive advances can be expected include biotechnology, nanotechnology, and machine intelligence. We may also look forward various ways to enhance human cognitive and other abilities using, e.g., pharmaceuticals, genetic engineering or machine-brain interfaces - perhaps to the extent of changing human nature beyond what we currently think of as human, and into a posthuman era. The potential benefits of all these technologies are enormous, but so are the risks, including the possibility of human extinction. This book is a passionate plea for doing our best to map the territories ahead of us, and for acting with foresight, so as to maximize our chances of reaping the benefits of the new technologies while avoiding the dangers.

Earth: The Operators' Manual Aug 21 2019 The book—companion to a PBS series—that proves humans are causing global warming and offers a path to the future. Since the discovery of fire, humans have been energy users and always will be. And this is a good thing—our mastery of energy is what separates us from the rest of the animal kingdom and has allowed us to

be the dominant species on the planet. However, this mastery comes with a price: we are changing our environment in a profoundly negative way by heating it up. Using one engaging story after another, coupled with accessible scientific facts, world authority Richard B. Alley explores the fascinating history of energy use by humans over the centuries, gives a doubt-destroying proof that already-high levels of carbon dioxide are causing damaging global warming, and surveys the alternative energy options that are available to exploit right now. These new energy sources might well be the engines for economic growth in the twenty-first century.

The New World of Economics Feb 25 2020 The New World of Economics, 6th edition, by Richard McKenzie and Gordon Tullock, represents a revival of a classic text that, when it was first published, changed substantially the way economics would be taught at the introductory and advanced levels of economics for all time. In a very real sense, many contemporary general-audience economics books that seek to apply the "economic way of thinking" to an unbounded array of social issues have grown out of the disciplinary tradition established by earlier editions of The New World of Economics. This new edition of The New World will expose new generations of economics students to how McKenzie and Tullock have applied in a lucid manner a relatively small number of economic concepts and principles to a cluster of topics that have been in the book from its first release and to a larger number of topics that are new to this edition, with the focus of the new topics on showing students how economic thinking can be applied to business decision making. This edition continues the book's tradition of taking contrarian stances on important economic issues. Economics professors have long reported that The New World is a rare book in that

students will read it without being required to do so. In The Remaking of Social Contracts, leading thinkers and activists address a wide range of concerns - global economic governance, militarism, ecological tipping points, the nation state, movement-building, sexuality and reproduction, and religious fundamentalism. These themes are of wide-ranging importance for the survival and well-being of us all, and reflect the many dimensions and inter-connectedness of our lives. Using feminist lenses, the book puts forward a holistic and radical understanding of the synergies, tensions and

contradictions between social movements and global, regional and local power structures and processes, and it points to other alternatives and possibilities for this fierce new world.
