Motor

Engineering

Knowledge for

Marine Engineers

Dec 23 2019

Developed to compliment Volume 8 (General

Engineering Knowledge) and

work as an

examination guide for the

requirements of the IMO's Engineering

Knowledge under regulation III/2,

covering the syllabuses followed

by Chief Engineers and 2nd Engineers,

and 2nd Engineers,

this book helps

officer cadets

working toward the

STCW Officer of the

Watch qualification

or equivalent

academic award.

Starting with the

theoretical and

practical

thermodynamic

operating cycles,

the book is

structured to give a

description of the

engines and

components used to

extract energy from

fossil fuels and

achieve high levels

of productivity. The

book covers areas

that have the

potential to affect

engine efficiency

and emissions.

including new electronic control systems, fuel injection and efficient turbocharging. It also looks at waste heat recovery, an important development area for improving the environmental impact of ocean going vessels. It also considers new technology and individual components within the engine which means that more energy, left over from the combustion process, can be extracted and used to improve the total thermal efficiency. The book evaluates issues of safety and environment, highlighting why the new technology must work correctly at all times and why

THE STORY OF AMERICA'S FIRST MODERN TRUE SPORTS CAR ORIGINAL DESCRIPTION

(1958): " For nearly a quarter of a century the American highway was without a domestic automobile which could accurately be labeled a true sports car. The names Stutz, Mercer, Dusenbergl, Kissell and a host of others—including some as recent as Cord and Auburn have almost vanished from the American automotive vocabulary. The names and the magic they invoked are almost
